Chronic Kidney Disease Management Hypertension Dialysis

Managing Chronic Kidney Disease NIDDK

May 15th, 2019 - If you have chronic kidney disease CKD you can take steps to protect your kidneys from more damage. The sooner you know you have kidney disease, the better. The steps you take to protect your kidneys from damage also may help prevent heart disease—and improve your health overall. Making these

 Chronic Kidney Disease CKD ClinicWiki

May 14th, 2019 - Chronic kidney disease CKD is defined as an estimated glomerular filtration rate eGFR mL/min/1.73 m² for at least 3 months OR a higher GFR with signs of kidney disease in urine or on imaging. 1

The CKD Epi equation is the most accurate for estimating GFR.

Guidelines for the management of chronic kidney disease

February 6th, 2017 - Hypertension Hypertension is commonly associated with chronic kidney disease. It develops in more than 75% of patients with chronic kidney disease at any stage. It is both a cause and a consequence of chronic kidney disease. This section of the guidelines highlights key aspects of the management of hypertension in patients with chronic kidney disease.

UpToDate

Prevention and Risk Management Chronic Kidney Disease

December 20th, 2017 - Preventing chronic kidney disease CKD and its complications is possible by managing risk factors and treating the disease to slow its progression and reduce the risk of complications. To keep healthy kidneys, it is important to control those risk factors for CKD that can be modified.

Chronic Kidney Disease Armando Hasudungan

May 14th, 2019 - Overview. Type II diabetes mellitus is the leading cause of Chronic Kidney Disease. It is classified as a secondary nephrotic syndrome. 20% of people with Type II diabetes will develop end-stage kidney disease. Everyone with diabetes should be screened yearly for microalbuminuria.
Kidney Disease and Hypertension Center of New Mexico provides Southern New Mexico’s most comprehensive nephrology care. We specialize in the diagnosis and treatment of high blood pressure, kidney disease, hemodialysis, peritoneal dialysis, and the preparation for and treatment of patients with kidney transplants.

Managing Chronic Kidney Disease NIDDK

May 15th, 2019 - If you have chronic kidney disease (CKD), you can take steps to protect your kidneys from more damage. The sooner you know you have kidney disease, the better. The steps you take to protect your kidneys from damage also may help prevent heart disease and improve your health overall. Making these changes can help manage your condition and slow the disease process.

Hypertensive kidney disease Wikipedia

May 16th, 2019 - Hypertensive kidney disease is a medical condition referring to damage to the kidney due to chronic high blood pressure. Hypertensive nephrosclerosis is common in individuals over the age of 60, while malignant nephrosclerosis is uncommon and affects 1.5% of individuals with high blood pressure that have diastolic blood pressure passing 130 mm Hg.

Cultural differences in end-stage kidney disease care

Research has shown that cultural differences can impact the care and outcomes for patients with end-stage kidney disease. Providers and patients from different cultural backgrounds may have different preferences and needs, which can affect treatment decisions and adherence to care plans.

The National Kidney Foundation defines chronic kidney disease (CKD) as a glomerular filtration rate (GFR) of less than 60 mL per minute per 1.73 m² or evidence of kidney damage with or without a history of hypertension.

There is no cure for chronic kidney disease, but treatment can help relieve the symptoms and stop it from getting worse. Your treatment will depend on the stage of your CKD. Good control of blood pressure is vital to protect the kidneys. People with kidney disease should usually aim to get their blood pressure under control. This can help prevent further damage to the kidneys.
