diabetic foot care assessing the impact of care on the whole patient monica sutton clare mcgrath lesley brady john ward abstract there is little doubt that provision of special care for people with diabetic foot ulcers reduces morbidity and, since there have been notably few studies conducted to assess the level of awareness and knowledge among diabetic patients we have designed this study to assess the knowledge attitudes and practices regarding foot ulcer care among patients attending secondary care hospitals in the eastern province, frequently asked questions diabetic foot ulcers what is a diabetic foot ulcer a diabetic foot ulcer is an open sore or wound that occurs in approximately 15 percent of patients with diabetes and is commonly located on the bottom of the foot, diabetic foot problems such as ulcerations infections and gangrene are the most common cause of hospitalization among diabetic patients routine ulcer care treatment of infections amputations and hospitalizations cost billions of dollars every year and place a tremendous burden on the health care system, foot care inspect your feet every day and seek care early if you do get a foot injury make sure your health care provider checks your feet at least once a year more often if you have foot problems your health care provider should also give you a list and explain the do s and don ts of foot care, questions for people with diabetes stages of change questions staff assessment medical assistant diabetes survey the diabetes initiative was a national program of the robert wood johnson foundation from 2002 to 2009 archived in 2009 this site is a repository for information and resources gathered over the course of the initiative, assessment of the patient with established diabetes in this article when how and who aims of assessing the patient with diabetes a checklist for a routine annual or opportunistic review of the patient with diabetes, for people with diabetes foot complications are an ever present risk however it is possible to design a plan for keeping the feet as healthy as possible it is important to learn as much as possible about diabetic foot care and to take an active role in medical decisions and care, revised 01 16 2010 sparrow health system diabetes self care questionnaire thank you for taking the time to complete our questionnaire we kindly ask that you please fill in the, appendix 1 kap questionnaire on diabetic foot care knowledge assessment total score 10 1 is it true that all patients with diabetes develop reduced blood flow in their feet 2 is it true that all patients with diabetes develop lack of sensations in their feet 3 is it true that all patients with diabetes develop foot ulcers 4, diabetes foot care questionnaire name taking care of your feet is an important part of diabetes care please answer the following questions about your feet and how you care for them please return the completed form to the diabetes centre history of foot problems have you ever had a sore or cut on your
Foot or leg that took more than, foot care inspect your feet every day and seek care early if you do get a foot injury make sure your health care provider checks your feet at least once a year more often if you have foot problems your health care provider should also give you a list and explain the dos and donts of foot care, comprehensive foot examination and risk assessment a report of the task force of the foot care interest group of the american diabetes association with endorsement by the american association of clinical endocrinologists, frequently asked questions diabetic foot ulcers what is a diabetic foot ulcer a diabetic foot ulcer is an open sore or wound that occurs in approximately 15 percent of patients with diabetes and is commonly located on the bottom of the foot, one of the most widely used self reporting tools assessing diabetes self management in english is the summary of diabetes self care activities sdscsa measure to date there is no psychometric validated instrument in german to assess self management in patients with diabetes mellitus therefore this study aimed to translate the sdscsa into german and examine its psychometric properties, we used a diabetic foot care questionnaire designed by hasnain et al 2 which is a set of 15 yes or no questions on knowledge and practice table ii the questionnaire was translated into local language of bahasa malaysia and was tested and validated, involving a total of 1 988 people with diabetes and provide a revised version of the summary of diabetes self care activities sdscsa measure research design and methods the sdscsa measure is a brief self report questionnaire of diabetes self management that includes items assessing the following aspects, practice program on diabetes foot care will have improved knowledge on conducting foot exams including foot inspection pedal pulses foot care and patient education hypothesis 2 patient foot evaluation measured through chart reviews for foot inspection pedal pulses foot care and patient education will improve in frequency following an, good knowledge and practice regarding diabetic foot care will reduce the risk of diabetic foot complications and ultimately amputation this study is conducted to assess patients knowledge and compliance of diabetic foot care a cross sectional study performed on patients who were admitted to hsnz from the 1st september 2013 to 30th april, diabetes assessment form 2 of 2 self monitoring of blood glucose which of the following has your health care team doctor nurse dietician or diabetes educator advised you to do, foot care system assessment tool impact of a quality management intervention upon foot care diabetic foot care on a typical day at the va medical center or satellite cboc clinic please circle the number of the response that best reflects your judgment some of the questions may not fit your situation in that case you may, it is our aim to prevent diabetic foot ulceration and amputation to detect at risk diabetic foot our podiatrist will perform a comprehensive diabetic foot assessment this comprehensive foot assessment comprises of assessing several important components mainly the risk factors for developing foot problems and complication, recognizing that both foot care knowledge and behaviors are critical for the prevention of lower limb complications in diabetic patients and that there are scarce brazilian studies on this subject the objective of the present study was to assess foot care knowledge and behaviors in diabetic subjects methods, foot ulcers and other lower limb complications secondary to diabetes are common complex costly and associated with increased morbidity and mortality 1 6 unfortunately patients often have difficulty recognizing the heightened risk status that accompanies the diagnosis of diabetes particularly the substantial risk for lower limb complications 7 in addition loss of protective sensation, why foot assessment is important in people with diabetes components of an effective foot assessment classifying risk of ulceration careful foot care for patients with diabetes can help to avoid foot ulcers and amputation practice nurses should know how to carry out a foot assessment assessing the foot in patients with diabetes, i inappropriate footwear
is the most common source of trauma in patients with diabetes frequent and proper assessment of appropriate footwear is essential for protecting the diabetic foot from ulceration here is a step by step process for evaluating footwear be sure to evaluate footwear with the patient walking standing and sitting, development and validation of a diabetes foot self care behavior scale yen fan chin1 amp tzu ting huang2 lphd candidate rn instructor graduate institute of clinical medical sciences school of nursing chang gung university amp 2phd rn professor healthy aging research center and school of nursing chang gung university introduction diabetes is a common chronic disease, foot risk assessment form guide september 2009 diabetes care program of nova scotia 2009 diabetes care program of nova scotia 2009 dcpns diabetes foot risk assessment form guidelines the diabetic foot risk assessment form appendix a is one of a series of patient and provider foot and assessment by foot care professionals, the aim of this study was to determine the knowledge and practice of foot care in people with type 2 diabetes we carried out a crosssectional study a questionnaire was completed by 148 patients with type 2 diabetes in tehran iran knowledge score was calculated and the current practice was determined, national foot care project national association of diabetes centres australasian podiatry council basic foot assessment checklist 1 ask the patient neuropathic symptoms y n rest pain y n intermittent claudication y n previous foot ulcer y n amputation y n specify site date 2 you re more likely to have foot problems with diabetes because it can damage your nerves and lessen blood flow to your feet the american diabetes association estimates that it s the reason why 1, in order to assess self care activities which can predict glycaemic control the diabetes self management questionnaire dsmq was designed a 16 item questionnaire to assess self care activities associated with glycaemic control was developed based on theoretical considerations and a process of empirical improvements, assessment of the patient with established diabetes in this article when how and who aims of assessing the patient with diabetes a checklist for a routine annual or opportunistic review of the patient with diabetes, foot care system assessment tool impact of a quality management intervention upon foot care diabetic foot care on a typical day at the va medical center or satellite cboc clinic please circle the number of the response that best reflects your judgment some of the questions may not fit your situation in that case you may, foot assessment and care for older people 9 december 2014 why patients may no longer be able to look after their own feet and aims to give health professionals guidance on foot problems assessment and care and advise them on when it is appropriate to refer patients for specialist advice and referring to the diabetic foot care team, you re more likely to have foot problems with diabetes because it can damage your nerves and lessen blood flow to your feet the american diabetes association estimates that it s the reason why 1, revised 01 16 2010 sparrow health system diabetes self care questionnaire thank you for taking the time to complete our questionnaire we kindly ask that you please fill in the, involving a total of 1 988 people with diabetes and provide a revised version of the summary of diabetes self care activities sdsca measure research design and methods the sdsca measure is a brief self report questionnaire of diabetes self management that includes items assessing the following aspects, diabetic foot problems such as ulcerations infections and gangrene are the most common cause of hospitalization among diabetic patients routine ulcer care treatment of infections amputations and hospitalizations cost billions of dollars every year and place a tremendous burden on the health care system the average cost of healing a single ulcer is 8 000 that of an infected ulcer is, the application of these findings is one of support for previous research by adding strength to the evidence regarding diabetic foot self care practices diabetes education is a predictor of foot self care behaviors and the
Clinician is in a pivotal role not only to educate but to inspire self-efficacy in the diabetic individual. Diabetes assessment form 2 of 2: self-monitoring of blood glucose, which of the following has your healthcare team doctor, nurse, dietician or diabetes educator advised you to do, results the questionnaire for diabetes-related foot disease (QDFD) comprised 12 questions aimed at determining presence of peripheral sensory neuropathy (PN) and peripheral vascular disease (PVD) based on self-report of symptoms and/or clinical history and self-report of foot ulceration, amputation, and foot deformity. This study aimed to evaluate the effect of a foot self-care program among diabetic elderly adults in geriatrics home through 1 assessing older adults' knowledge and practice regarding diabetes and foot care, 2 developing a foot self-care program for older adults, 3 determining the effect of the self-care program on older adults' hypothesis, careful foot care for patients with diabetes can help to avoid foot ulcers and amputation. Practice nurses should know how to carry out a foot assessment, practice nurses should know how to carry out a foot assessment abstract citation Rawles Z, 2014 assessing the foot in patients with diabetes, to assess the knowledge and practice regarding foot care among diabetes patients at Krishna Hospital Karad Abkrishna Institute of Medical Sciences Deemed University Krishna Institute of Nursing Sciences Karad Maharashtra India abstract this paper study for assess the knowledge and practices regarding foot care among diabetes patients, one of the most widely used self-reporting tools assessing diabetes self-management in English is the summary of diabetes self-care activities (SDSCA) measure. To date, there is no psychometric validated instrument in German to assess self-management in patients with diabetes mellitus; therefore, this study aimed to translate the SDSCA into German and examine its psychometric properties, foot ulcers and other lower limb complications secondary to diabetes are common, complex, costly, and associated with increased morbidity and mortality. Unfortunately, patients often have difficulty recognizing the heightened risk status that accompanies the diagnosis of diabetes, particularly the substantial risk for lower limb complications. In addition, loss of protective sensation, tions of diabetic peripheral neuropathy (DPN) influencing foot self-care. Research design and methods: the patient interpretation of neuropathy (PIN) questionnaire generated from discussions with clinicians and interviews with patients with DPN was administered to patients with DPN attending UKN 325 and USN 170 diabetes centers, in order to facilitate the collection of appropriate data the diabetes self-management questionnaire (DSMQ) was developed. The questionnaire was designed to assess self-care behaviors which can be related to the measure of HbA1c so that the data are suitable for mediational analyses. A second objective was to construct a brief instrument, patients were given an interviewer-administered pretested questionnaire to assess the knowledge and practice of diabetic foot care. The questionnaire was based on the diabetic foot care principles found in the diabetes committee of the American Orthopaedic Foot and Ankle Society guidelines. The lifetime incidence of developing a foot ulcer may be as high as 25% for the 24 million Americans with diabetes. Ulcers defined as any breaks in the cutaneous barrier are the most frequent type of diabetic foot wounds and usually extend through the dermis. 2 Foot ulcers can cause substantial morbidity arising from physical and emotional effects. Loss of diabetic foot care services and availability of healthcare professionals with expertise in the management of diabetic foot problems the implementation of foot care screening programs is still varied across the UK and there is, patients were given an interviewer-administered pretested questionnaire to assess the knowledge and practice of diabetic foot care. The questionnaire was based on the diabetic foot care principles found in the diabetes committee of the American Orthopaedic Foot and
ankle society guidelines 19 international consensus on the diabetic foot 20 22, good knowledge and practice regarding diabetic foot care will reduce the risk of diabetic foot complications and ultimately amputation this study is conducted to assess patients knowledge and compliance of diabetic foot care a cross sectional study performed on patients who were admitted to hsnz from the 1st september 2013 to 30th april, measuring the attitudes of patients towards diabetes and its treatment robert m anderson michael b donnelly and robert f dedrick the university of michigan medical school michigan diabetes research and training center department of postgraduate of diabetes care and 4 behavioral scientists the group interacted by mail through a modi, diabetic foot care services and availability of healthcare professionals with expertise in the management of diabetic foot problems the implementation of foot care screening programmes is still varied across the uk and there is, clinical assessment and classification of the diabetic foot dr pc chye diabetic foot assessment identify the patients at risk so that they can receive task force report of the foot care interest group of the american diabetes association diabetes care volume 31 number 8 1679 1685 august 2008, diabetes foot risk assessment education program participants package diabetes nursing interest group registered nurses association of ontario 6 how often should a health provider reinforce the importance of diabetes foot care for persons at lower risk, an evaluation of the effectiveness of providing foot care education in a rural clinic setting an evaluation of the effectiveness of providing foot care education in a rural clinic setting 2014 doctoral projects 30 a study on self care of the diabetic foot had not previously been conducted in the wound care center or in any other, good knowledge and practice regarding diabetic foot care will reduce the risk of diabetic foot complications and ultimately amputation this study is conducted to assess patients knowledge and, diabetic foot care questionnaire prior foot problems previous amputation of leg or portion of foot yes no previous foot ulcer yes no if yes date have you been told that you have reduced sensation in your feet yes no current foot or leg problems ulcer, to assess the knowledge and practice regarding foot care among diabetes patients at krishna hospital karad abkrishna institute of medical sciences deemed university krishna institute of nursing sciences karad maharashtra india abstract this paper study for assess the knowledge and practices regarding foot care among diabetes patients, a study to determine the knowledge and practice of foot care in the knowledge and practice of diabetic foot care the questionnaire was based on the lanka nhsl to assess the knowledge on diabetic foot care it showed a mean knowledge of 80 accordingly for a, a study to determine the knowledge and practice of foot care in the knowledge and practice of diabetic foot care the questionnaire was based on the lanka nhsl to assess the knowledge on diabetic foot care it showed a mean knowledge of 80 accordingly for a, national foot care project national association of diabetes centres australasian podiatry council basic foot assessment checklist 1 ask the patient neuropathic symptoms y n rest pain y n intermittent claudication y n previous foot ulcer y n amputation y n specify site date 2, background diabetic foot ulcers are a complication affecting approximately 15 of the total population with diabetes mellitus there are three and half million diabetic patients in saudi arabia alone aim to determine capacity building for nurses knowledge and practice regarding prevention of diabetic foot complications research questions 1, it is our aim to prevent diabetic foot ulceration and amputation to detect at risk diabetic foot our podiatrist will perform a comprehensive diabetic foot assessment this comprehensive foot assessment comprises of assessing several important components mainly the risk factors for developing foot problems and complication, diabetic foot ulcer scale dfs questionnaire the diabetic foot ulcer scale dfs questionnaire is a quality of life instrument designed specifically to
assess the impact of foot ulcers and their treatment on quality of life in people with diabetes and has been validated in cross sectional and longitudinal studies, is diabetic foot which is a result of a combination of decreased sensation and reduced arterial supply assessing for peripheral neuropathy is a routine part of ongoing care for patients with diabetes treatment of diabetic neuropathy includes optimal control of hyperglycaemia appropriate foot care often involving, a study to assess the effectiveness of planned teaching programme on knowledge regarding care of diabetic foot among diabetic patients admitted in selected hospitals at tumkur 6 4 objectives of the study 1 to assess the pre test knowledge regarding care of diabetic foot among diabetic patients 2, diabetic foot care assessing the impact of care on the whole patient monica sutton clare mcgrath lesley brady john ward abstract there is little doubt that provision of special care for people with diabetic foot ulcers reduces morbidity and, recognizing that both foot care knowledge and behaviors are critical for the prevention of lower limb complications in diabetic patients and that there are scarce brazilian studies on this subject the objective of the present study was to assess foot care knowledge and behaviors in diabetic subjects methods, assessment questionnaire regarding diabetes foot care part 2 patients sociodemographic knowledgepart 3 patient practice assessment questionnaire tool ii observational checklist for nurses practice about neurovascular assessment for diabetic patients results there were significant differences and improvement, diabetes foot risk assessment education program participants package diabetes nursing interest group registered nurses association of ontario 6 how often should a health provider reinforce the importance of diabetes foot care for persons at lower risk, in order to assess self care activities which can predict glycaemic control the diabetes self management questionnaire dsmq was designed a 16 item questionnaire to assess self care activities associated with glycaemic control was developed based on theoretical considerations and a process of empirical improvements, in order to facilitate the collection of appropriate data the diabetes self management questionnaire dsmq was developed the questionnaire was designed to assess self care behaviours which can be related to the measure of hba 1c so that the data are suitable for mediational analyses a second objective was to construct a brief instrument, offer non weight bearing treatment until definitive treatment can be started by the multidisciplinary foot care service diabetes foot ulcer if a person has a diabetic foot ulcer assess and document the size depth and position of the ulcer, why foot assessment is important in people with diabetes components of an effective foot assessment classifying risk of ulceration careful foot care for patients with diabetes can help to avoid foot ulcers and amputation practice nurses should know how to carry out a foot assessment assessing the foot in patients with diabetes, we used a diabetic foot care questionnaire designed by hasnain et al 2 which is a set of 15 yes or no questions on knowledge and practice table ii the questionnaire was translated into local language of bahasa malaysia and was tested and validated, assessment of knowledge and practices of diabetic patients regarding diabetic foot care in makkah saudi arabia reda goweda 1 mokhtar shatla 2 arwa alzaidi 3 arij alzaidi 4 bashaer aldhawani 3 hibah alharbi 4 noran sultan 4 daniah alnemari 4 badr rawa 5 1 department of family medicine faculty of medicine suez canal university ismailia egypt 2 department of family medicine, diabetes foot care questionnaire completed by patient during initial assessment period and periodically thereafter patient consumer awareness of diabetic foot problems identifies knowledge gaps foot care education tailored to the individual promotes self care, is diabetic foot which is a result of a combination of decreased sensation and reduced arterial supply assessing for peripheral neuropathy is a routine part of ongoing care for patients with diabetes treatment of diabetic neuropathy includes optimal control of
hyperglycaemia appropriate foot care often involving, diabetes foot care questionnaire completed by patient during initial assessment period and periodically thereafter patient consumer awareness of diabetic foot problems identifies knowledge gaps foot care education tailored to the individual promotes self care, diabetes care especially when assessing the effectiveness designed a questionnaire to assess four well defined specific self care activities associated exercise blood glucose testing foot, practice program on diabetes foot care will have improved knowledge on conducting foot exams including foot inspection pedal pulses foot care and patient education hypothesis 2 patient foot evaluation measured through chart reviews for foot inspection pedal pulses foot care and patient education will improve in frequency following an, assessment of knowledge and practices of diabetic patients regarding diabetic foot care in makkah saudi arabia reda goweda 1 mokhtar shatla 2 arwa alzaidi 3 arij alzaidi 4 basher aldhawani 3 hibiah alharbi 4 noran sultan 4 daniah alnemari 4 badr rawa 5 1 department of family medicine faculty of medicine suez canal university ismailia egypt 2 department of family medicine, on the other hand diabetic foot self care practice questionnaire is adopted from validated instrument of nottingham assessment of functional foot care naffc responses to questions were recorded on a categorical scale scored 03 according to the frequency of occurrence of the behavior, appendix 1 kap questionnaire on diabetic foot care knowledge assessment total score 10 1 is it true that all patients with diabetes develop reduced blood flow in their feet 2 is it true that all patients with diabetes develop lack of sensations in their feet 3 is it true that all patients with diabetes develop foot ulcers 4, questions for people with diabetes stages of change questions staff assessment medical assistant diabetes survey the diabetes initiative was a national program of the robert wood johnson foundation from 2002 to 2009 archived in 2009 this site is a repository for information and resources gathered over the course of the initiative, measuring the attitudes of patients towards diabetes and its treatment robert m anderson michael b donnelly and robert f dedrick the university of michigan medical school michigan diabetes research and training center department of postgraduate of diabetes care and 4 behavioral scientists the group interacted by mail through a modi, on the other hand diabetic foot self care practice questionnaire is adopted from validated instrument of nottingham assessment of functional foot care naffc responses to questions were recorded on a categorical scale scored 03 according to the frequency of occurrence of the behavior, assessment questionnaire regarding diabetes foot care part 2 patients sociodemographic knowledgepart 3 patient practice assessment questionnaire tool ii observational checklist for nurses practiceabout neurovascular assessment for diabetic patient s results there were significant differences and improvement, comprehensive foot examination and risk assessment a report of the task force of the foot care interest group of the american diabetes association with endorsement by the american association of clinical endocrinologists, diabetic foot ulcers can be prevented through well coordinated foot care services the objective of this study was to determine knowledge of foot care and reported practice of foot self care among diabetic patients with the aim of identifying and addressing barriers to preventing amputations among diabetic patients, for people with diabetes foot complications are an ever present risk however it is possible to design a plan for keeping the feet as healthy as possible it is important to learn as much as possible about diabetic foot care and to take an active role in medical decisions and care, results the questionnaire for diabetes related foot disease q dfd comprised 12 questions aimed at determining presence of peripheral sensory neuropathy pn and peripheral vascular disease pvd based on self report of symptoms and or clinical history and self report of foot ulceration amputation and foot deformity, diabetic foot care self reported
The purpose of this study is to clarify the care process for Iranian diabetic patients with diabetic foot ulcer condition. The main question of this research was how is the care process for diabetic foot ulcer patients and how do patients experience it. This study was carried out until data saturation was achieved.

Objectives

- To determine the level of awareness and attitude to foot care among adult diabetic patients attending a university health centre i.e. a primary care centre.
- To emphasise the ever-present need for health education and promotion and early complication detection especially of foot problems among diabetic foot ulcers can be prevented through well-coordinated foot care services.

The objective of this study was to determine knowledge of foot care and reported practice of foot self-care among diabetic patients with the aim of identifying and addressing barriers to preventing amputations among diabetic patients.

**Diabetic foot care assessing the impact of care on the whole patient**

January 16th, 2019 - Diabetic foot care assessing the impact of care on the whole patient. Monica Sutton, Clare McGrath, Lesley Brady, John Ward. ABSTRACT: There is little doubt that provision of special care for people with diabetic foot ulcers reduces morbidity and mortality.

**Descriptive study on the knowledge attitudes and practices of diabetic patients**

April 11th, 2019 - Since there have been notably few studies conducted to assess the level of awareness and knowledge among diabetic patients, we have designed this study to assess the knowledge attitudes and practices regarding foot ulcer care among patients attending secondary care hospitals in the Eastern Province.

**Frequently Asked Questions Diabetic Foot Ulcers**

April 16th, 2019 - Diabetic Foot Ulcer. What is a Diabetic Foot Ulcer? A diabetic foot ulcer is an open sore or wound that occurs in approximately 15 percent of patients with diabetes and is commonly located on the bottom of the foot.

**Evaluation and Treatment of Diabetic Foot Ulcers**

April 21st, 2019 - Diabetic foot problems such as ulcerations, infections, and gangrene are the most common cause of hospitalization among diabetic patients. Routine ulcer care, treatment of infections, amputations, and hospitalizations cost billions of dollars every year and place a tremendous burden on the health care system.

**Foot Care American Diabetes Association®**

April 21st, 2019 - Foot Care. Inspect your feet every day and seek care early if you do get a foot injury. Make sure your health care provider checks your feet at least once a year more often if you have foot problems. Your health care provider should also give you a list and explain the dos and don’ts of foot care.

**Tools Assessment Instruments Diabetes Initiative**

April 20th, 2019 - Questions for People with Diabetes Stages of Change Questions. Staff Assessment Medical Assistant Diabetes Survey. The Diabetes Initiative was a national program of the Robert Wood Johnson Foundation from 2002 to 2009. Archived in 2009, this site is a repository for information and resources gathered over the course of the Initiative.

Specialised Wound Care Diabetic Foot Assessment
April 5th, 2019 - It is our aim to prevent diabetic foot ulceration and amputation To detect at risk diabetic foot our podiatrist will perform a comprehensive diabetic foot assessment This comprehensive foot assessment comprises of assessing several important components mainly the risk factors for developing foot problems and complication

Behavior and knowlege basis for prevention of diabetic foot
April 11th, 2019 - Recognizing that both foot care knowledge and behaviors are critical for the prevention of lower limb complications in diabetic patients and that there are scarce Brazilian studies on this subject the objective of the present study was to assess foot care knowledge and behaviors in diabetic subjects METHODS
How to do a 3 minute diabetic foot exam

April 10th, 2019 - Foot ulcers and other lower limb complications secondary to diabetes are common and costly and associated with increased morbidity and mortality.

Unfortunately patients often have difficulty recognizing the heightened risk status that accompanies the diagnosis of diabetes particularly the substantial risk for lower limb complications.

In addition, loss of protective sensation.

Assessing the foot in patients with diabetes

April 19th, 2019 - Why foot assessment is important in people with diabetes.

Components of an effective foot assessment:
- Classifying risk of ulceration
- Careful foot care for patients with diabetes can help to avoid foot ulcers and amputation.
- Practice nurses should know how to carry out a foot assessment.

Assessing footwear in patients with diabetes

April 17th, 2019 - Inappropriate footwear is the most common source of trauma in patients with diabetes.

Frequent and proper assessment of appropriate footwear is essential for protecting the diabetic foot from ulceration.

Here is a step by step process for evaluating footwear:
- Be sure to evaluate footwear with the patient walking, standing, and sitting.

Development and Validation of a Diabetes Foot Self Care

April 9th, 2019 - Development and Validation of a Diabetes Foot Self Care Behavior Scale.
